## Relief and Vertical Intervals

It is important to be able to visualize what features on a map look like on the ground. Draw a line from each of the following profiles of structures on the left to the correct contour diagram on the right.

Match the description numbers and the contour drawing letters in the table below. Assume the top of the page is north.

1. Has two peaks of equal height with a saddle between them
2. Has a crater in the top
3. West slope is gradual; east slope is steep
4. Has two peaks; the west is two contour intervals higher than the east
5. Symmetrical hill
